CC 101 – Introduction to Computing

Laboratory Worksheet No. 1 | Week 3: Computer Components I – Hardware (CO2)

"Know Your Machine": Exploring the Computer Unit You Are Using

Name: Reyna Jean S. Todoc **Section:** BSCS 1-1

Computer Unit Used (Desktop/Laptop, brand): Laptop hp **Date:** 09/16/2026

I. Objectives

At the end of this activity, you should be able to:

- Identify the major hardware components of the computer unit you are using and describe the function of each.
- Use built-in Windows 11 tools to inspect and record your computer's technical specifications.
- Distinguish between input, output, processing, and storage devices on an actual working computer.
- Document your exploration accurately and reflect on what you learned.

II. Materials Needed

- A computer unit running Windows 11 (school laboratory PC or personal laptop/desktop)
- This worksheet (printed copy, or the digital file to fill out and submit)
- Optional: smartphone camera, to photograph the physical unit and ports for your own reference

III. Background

Every computer, whether a desktop tower or a laptop, is built from hardware components that fall into four general categories: input devices (send data into the computer, e.g., keyboard, mouse), output devices (present processed data to the user, e.g., monitor, speakers), the processing/storage unit (CPU, RAM, and drives that compute and hold data), and ports/peripherals (connectors that link external devices to the system unit). Windows 11 also provides several built-in tools — Settings, System Information, Device Manager, and Task Manager — that let you inspect these components without opening the case. This activity uses both direct observation and these software tools.

IV. Procedure

Part A – Physical Inspection (5–10 minutes)

1. Examine the computer unit in front of you. If it is a desktop, look at the system unit (tower/case); if it is a laptop, examine the whole chassis.
2. List all the input devices you can see or that are built in (e.g., keyboard, mouse, touchpad, webcam, microphone).
3. List all the output devices you can see or that are built in (e.g., monitor/screen, speakers, headphone jack).
4. Locate the available ports on the unit (USB-A, USB-C, HDMI, audio jack, Ethernet/LAN, power, etc.) and note what each one is typically used to connect.

Part B – System Identification (Settings)

5. Click Start → Settings → System → About.

6. Record the Device name, Processor, Installed RAM, Device ID, and System type shown under Device specifications.
7. Scroll down to Windows specifications and record the Edition, Version, and OS build.

Part C – Detailed Hardware Check (System Information)

8. Press the Windows key, type System Information, and open it (this runs the msinfo32 tool).
9. On the System Summary page, record the System Manufacturer, System Model, BIOS Version/Date, and Total Physical Memory.

Part D – Device Manager Exploration

10. Right-click the Start button and choose Device Manager.
11. Expand at least six (6) categories — for example: Display adapters, Network adapters, Sound/video/game controllers, Disk drives, Keyboards, Mice and other pointing devices, and Universal Serial Bus controllers.
12. For each category you expand, write down the specific device name Windows lists (this is the exact model of that component in your unit).

Part E – Performance and Storage Check (Task Manager)

13. Open Task Manager (Ctrl + Shift + Esc) and click the Performance tab.
14. Record the CPU name, base speed, and number of cores; the total Memory (RAM) and its speed; and the Disk type (HDD or SSD) and capacity.

Part F – Software Snapshot (Optional / Bonus)

15. Go to Settings → Apps → Installed apps. List five (5) installed applications and classify each as System Software or Application Software.

V. Data and Findings

Table 1. System Identification Summary (Parts B & C)

Item	Your Findings
Device name	DESKTOP-4MKSC1R
Processor	12th Gen Intel(R) Core(TM) i5-12400 2.50 GHz
Installed RAM	8.00 GB (7.79 GB usable)
Device ID	635A5817-6B5D-4DD7-BDB1-0BD91DB6852E
System type (32-bit / 64-bit)	64- bit operating system, x64-based processor
Windows edition	Windows 10 Pro
Windows version	22H2
OS build	19045.5011
System manufacturer	Micro-Star International CO., Ltd.

Item	Your Findings
System model	MS-7D48
BIOS version / date	American Megatrends International, LLC, A. E0, 1/11/2024
Total physical memory	7.79 GB

Table 2. Physical Components Observed (Part A)

Component Observed	Type (Input/Output/Storage/Processing/Port)	Description / Observation
Mouse	Output	It dragged the arrow or click in the screen.
Keyboard	Output	It is where you click in order to input a letter or a number.
Monitor	Input	It show or display the visual information generated bY the computer.
USB	Port	It connect the external hardware.
Ethernet	Port	It handles wired networking.
Audio	Port	It manage sound input and output.
HDMI	Port	It transmits video, picture and audio.
Wires	Output	It connected the mouse, keyboard, PC, speaker etc. to the computer.
Personal Computer (PC)	Output	It is a digital device built for individual use at home, school, or work.

Table 3. Device Manager Findings (Part D)

Device Manager Category	Specific Device Name Listed
Display adapters	Intel(R) UHD Graphics 730
IDE ATA/ATAPI controllers	Standard SATA AHCI Controller
Keyboard	HID Keyboard Device
Monitor	Generic PnP Monitor

Device Manager Category	Specific Device Name Listed
Port (COM & LPT)	Communications Port (COM1)
Security Device	Trusted Platform Module 2.0
Storage controllers	Microsoft Storage Spaces Controller

Table 4. Software Snapshot (Part F, Optional / Bonus)

Installed Application	Classification (System / Application Software)
Dev-C++	A classic, lightweight, and free program that lets you write, run, and test C and C++ code on your computer.
Laragon 6.0.0	A local website creation environment stack or a universal server application for Windows.
Cortana	An intelligent personal assistant that is made possible through artificial intelligence technology
CodeBlock	The activity of finding, classifying, or defining areas within the source code according to their function, language, capability, or structure
Microsoft Edge	A proprietary, cross-platform web browser created by Microsoft.

VI. Realization (Reflection)

In two to four sentences each, answer the following in your own words.

1. What did you discover about your own computer unit that you did not know before doing this activity?

I discovered my computer's exact internal hardware specifications, model number and the operating system detailed by opening the Setting and going to the About.

2. Which hardware component do you think matters most to how your computer performs, and why?

I thInk the CPU matter most since it acts a the brain of the computer.

3. How might knowing your computer's hardware and software specifications help you as a future IT/CS professional?

Knowing the hardware and software specification help me understand the specifications of my computer especially since it's useful when developing software, ensuring compatibility of applications, and troubleshooting hardware performance problems.

4. What difficulties, if any, did you encounter while completing this activity, and how did you resolve them?

The only difficulty i encountered is my computer lagging out from time to time where it turns black all of the sudden and also the poor signal in my phone.

VII. Scoring Guide

Criteria	Description	Points
Completeness	All tables (1–4) and required fields are filled out.	30
Accuracy	Recorded specifications and device names match what the tools actually show.	30
Realization / Reflection	Answers are thoughtful, specific to the student's own unit, and well written.	30
Neatness & Timeliness	Worksheet is legible/well-formatted and submitted on time.	10
Total		**100**

Checked by: **Score:** / 100

Instructor's Signature over Printed Name / Date
